

Modern Slavery - Stone Computers Policy Statement

Stone recognises the potential risk of Human rights violations taking place within both UK and internationally based suppliers of goods or services. Stone employs a formal supplier approval process for verifying the suitability of its supply base, as far as is practical.

In acknowledgement of the issues surrounding the identification and access to all levels of the electronics sector supply chain, in particular those in vulnerable regions abroad; Stone are fully committed to the support of the 'Reform Programme' being developed by Electronics Watch. The programme's objective is to improve conditions within the sector, achieved through the unified buying power of the EU public sector and its demand for independently verified ethical sources of supply.

It is therefore Stone policy to promote the 'Reform Programme' amongst its UK public sector contacts and encourage those organisations to affiliate with Electronics Watch. Stone have contributed to the UK based campaign and will continue to do so in order that progress can be made within the sector.
